

Deep AGI

Artificial Intelligence with pre human **mind** in intelligence machine for chatbot.

Introduction

- **Facebook Messenger chatbots** will be the next BIG marketing trend in 2017 and beyond.
- More than **1 billion people are active on Messenger every month**, so why not monetize this platform as part of your/your client's social media marketing strategy?
- **The beauty is that chatbots are still in their infancy, meaning that very few businesses are using them to sell.** This equates to HUGE opportunity for you, as a digital marketer, because deploying a bot will help your brand — and whatever products you're selling — stand out from the competition.

Why should you use Chatbots for your business?

- **90% open rates**, compared to the average 30% with email marketing
- **Instant, relevant answers to users** who message your page, eliminating slow responses and missed sales
- **Reach all your fans** without paying Facebook to "boost" your posts
- **Personalize your sales pitches** using Facebook data, proving to customers that you understand them
- **Monetize your conversations** inside Messenger without redirecting them to a painfully slow sales page

Core technology

- Tensorflow technology from Google.
- DeepAGI linguistic framework(in progress).

Target Market

- Social media marketers
- Branding consultants
- "DIY" business owners

Pricing

- It's free!
